The diagram illustrates the flow of Primary HDI scores. A large white box on the left contains the text "Primary HDI scores (Bar and row charts)". Two arrows originate from the right side of this box: one points to a smaller white box at the top right, and the other points to a smaller white box at the bottom right. Both smaller boxes are empty.

The diagram illustrates the relationship between two variables, X and Y, using scatterplots and correlation scores. It features a central text box labeled "Correlation scores (Scatterplots)" flanked by two columns of three empty rectangular boxes each, representing scatterplots.

**Highest lowest averages and scores
(Bar and row charts)**
